

Approximate extent of Maen Hir Central

Representative Viewpoint 14 (Left) - Public footpath LLANNERCH-Y-MEDD | 25/036/1 and Penwerthyr Nature Area to south of Llyn Alaw reservoir

Existing View

This view is representative of walkers using the public footpath LLANNERCH-Y-MEDD|25/036/1 following the southern boundary of Llyn Alaw. The public footpath connects to properties at Gwredog and Tynyngl along the reservoir edge. The expansive waterbody occupies the foreground and midground view from the footpath. Beyond this, woodland on the southern edge of the reservoir can be seen to the left, mostly obscured by a local undulation. To the right, the northern edge of the reservoir can be seen in the midground view, with geometric pastoral fields bordered by hedgerows on the land which gently rises to enclose the horizon to the north. Isolated properties and farms can be seen in the distance. Llyn Alaw Wind Farm is prominent on the skyline to the north-west. To the centre of the view, woodland encloses the northern edge of the reservoir. To the right, views are foreshortened in the midground by vegetation on the southern edge of the Llyn Alaw. The foreground to the right of the view comprises rough, scrubby grassland between the footpath and stock proof fencing to the east, beyond which there are glimpses of pastoral fields to the north-east.

Operation Phase

Maen Hir Central would be visible in the midground view to north and east of Llyn Alaw. To the left, fields for mitigation and enhancement can be seen, with Fields 103 and 106 particularly visible. Just in front, Fields 101 and 102 can be seen adjacent to the reservoir edge. Towards the centre of the left view, Fields 98 and 99 are partially visible. To the centre of the view, Field 103 can be seen ahead of the property at Gongl Rhedyn, while a small cluster of fields for solar PV can be seen near the property at Penbol, with Field 106 particularly visible. The eastern section of Maen Hir Central is partially screened by intervening vegetation. During the operation phase, the scale of effects are likely to be **Medium** (adverse) prior to and once the embedded mitigation has established.
